Examination Control Division
2079 Ashwin

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE 652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. a) Define educational and residential building. What are the essentials of air conditioning? Explain. Air is flowing through a two square opening of size 0.3 m and 0.4 m in a 5m × 5m × 5m room, with a wind of 4 km/hr blowing at 90° to the opening. Take coefficient of effectiveness = 0.68. [5+5]
- b) Can a good sound insulating material be a poor sound absorber? Explain. Describe various system for sound insulation including detail on vertical and horizontal barrier system. [6]
2. a) Why is it necessary to carry out soil test for the foundation design? List types of deep foundation and critically illustrate on the use of various shallow foundations with sketches. [2+6]
- b) What do you mean by Masonry work? Calculate the quantity of materials for the construction of 20 cum. Brick masonry in 1:6 C/S mortar using Brick Size is 230 mm × 110 mm × 55 mm. [2+6]
3. a) Show the key components of slope roof. Explain any two roof covering materials commonly used in Terai region of Nepal. Give pros and cons of using such covering. [3+4]
- b) Define the term baluster, nosing, soffit and pitch with sketch. What are the types of stair? Explain any two with sketch. [7]
- a) Explain types of doors based on shutters. [4]
- b) Describe about suspended ground floor with sketch. [4]
- c) Define underpinning. Explain why temporary structures are used in building construction. Describe flying shoring with neat sketches. [1+3+2]
- a) Define cladding and its different types with their purposes. [6]
- b) Write short notes on structural and non structural cracks in the building. [4]
- a) Explain any five basic configuration factors that should be considered while designing earthquake resistant buildings. [5]
- b) Write a note on Rain water Harvesting. [5]

TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING

2079 Jestha

Exam.	Back	
Level	BE	Full Marks 80
Programme	BCE	Pass Marks 32
Year / Part	III / II	Time 3 hrs.

Subject: - Building Technology (CE 652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. Define daylight factor. What are the factors affecting thermal performance of the building? Describe types of natural ventilation. [4+4]
2. What should be considered for orientation and planning of the building? Explain different forces that move moisture in the building. [3+5]
3. "Excavation in foundation trenches in ground having high water table or in water logged area creates greater problem" How will you deal in such situation? Critically describe two methods that are commonly used in Nepal. Also explain various factors that should be kept in mind while excavating trenches for pipes. [4+4]
4. What are the properties of mortar? Calculate mortar required for construction of 10 m^3 first class brickwork using 1:4 cement sand mortar. (Size of brick = $57 \text{ mm} \times 115 \text{ mm} \times 240 \text{ mm}$ and thickness of mortar = 10 mm) [2+6]
5. Draw pitch roof and show its elements. What factors should be considered while selecting a roof covering materials. [3+3]
6. Design a dog-legged RCC staircase for a residential building with 3m floor to floor height. Draw plan and section to support of your answer. (Assume the size of stairwell yourself) [6]
7. Write down the construction method of any flooring type that is used in low cost housing especially in rural areas of Nepal. What precaution will you take to make such flooring durable? [5+1]
8. List the parts of scaffolding with suitable sketch. Differentiate between shoring and underpinning. [4+2]
9. Why is pointing necessary? What are the defects in plastering works? Explain various constituents of oil paint. [2+2+3]
10. Discuss the methods of repairing different types of cracks in building. [4]
11. What are the basic configuration related factors that should be considered for improving building for seismic safety? [5]
12. Write short notes on: (Any Two) [2×4]
 - a) Fire extinguisher
 - b) Rain water harvesting
 - c) Louvered window components with sketch

TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING

2078 Chaitra

Exam.	Regular	
Level	BE	Full Marks 80
Programme	BCE	Pass Marks 32
Year / Part	III / II	Time 3

Subject: - Building Technology (CE 652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. a) Define residential and institutional building. Explain types of mechanical ventilation system. Calculate the rate of air flow through two square openings of size 0.32m and 0.42m in a 4m×4m×4m room, with a wind of 5 km/hr blowing inclined at 45° to the opening. Take Coefficient of effectiveness =0.33. [10]
- b) Critically differentiate sound insulation & sound absorption. Explain common acoustic defects. [6]
2. a) What do you mean by the bearing capacity of the soil? Explain the different methods of improving the bearing capacity of soil. Discuss two common problem with existing foundations. [5+3]
- b) Describe the types of stone masonry. Explain step by step procedure for preparing cement mortar by manual process. [4+4]
3. a) Define the term Ridge, Hip and Purlin used in roof with suitable figure. Compare couple closed roof and collar roof over couple roof. [3+4]
- b) Define elevators and ramp. Design a dog-legged stair for a residential building with 3m floor height. (Assume the size of Stair-well yourself) [7]
4. a) Explain about the various types of door based on working mechanisms. [4]
- b) Explain in brief granites and tiles floor finishes. [4]
- c) Why is shoring necessary? Compare racking shores with flying shore. [2+4]
5. a) Define pointing & its types. [6]
- b) Write down the causes of cracks that occurs in a building and its remedial measures briefly. [4]
6. a) What are the types of Bands used in masonry structures? [5]
- b) Explain the term Building Services, Septic tank and Soak pit. [5]

TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING
Examination Control Division
2078 Poush

Exam.	Back
Level	BE
Programme	BCE
Year / Part	III / II
Full Marks	80
Pass Marks	32
Time	3 hrs.

Subject: - Building Technology (CE 652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. Describe briefly the functional requirements of ventilation. Calculate the rate of air flow through two square openings of size 0.36 m and 0.4 m in a 4m × 4m × 4m room, with a wind of 5km/hr blowing inclined at 45° to the opening. Take coefficient of effectiveness = 0.32. [4+4]
2. What are the factors to be considered during planning of the building? Explain any four common acoustic defects. [4+4]
3. "Excavation in foundation trenches in ground having high water table or in water logged area creates greater problem" How will you deal in such situation? Critically describe two methods that are commonly used in Nepal. Also compare earthwork excavation for foundation in soft soil and hard soil. [5+3]
4. What are the properties of mortar? Write in detail, the specifications of brick masonry works. [2+6]
5. Define the following terminologies used in roof with suitable figure: Ridge, Rafter, Purlin, Rise, Eaves, Hip and Battens. [7]
6. Design a dog-legged RCC staircase for a residential building with internal dimension of 4.6 m × 2.6 m and 3 m floor to floor height. Draw plan and section to support your answer. [6]
7. Describe the process of fixing wooden door frames. [4]
8. Write down the construction method of terrazzo flooring. [4]
9. List the parts of scaffolding with suitable sketch. Define underpinning and explain any one method of it. [4+3]
10. Why is pointing necessary? What are the defects in plastering works? Explain various constituents of oil paint. [2+2+3]
11. Show your view on structural and non-structural cracks in building. [4]
12. How does retrofitting differ from repair? Write a note on jacketing of column for retrofitting. [2+3]
13. Explain safety precautions to be taken during electrification of a building. [4]

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE 652)

Candidates are required to give their answers in their own words as far as practicable.

Attempt All questions.

The figures in the margin indicate Full Marks.

Assume suitable data if necessary.

What do you mean by passive solar design? Explain the importance of passive solar design. Describe the setting layout plan of building with sketch. [1+3+4]

Explain below grade and above grade water proofing system. Explain the methods to moisture moment in the building. [2+6]

What are the problems of foundations on black cotton soils? What type of foundation will you suggest for a building on black cotton soil? Justify your answer. [2+4]

Describe about cavity wall with its merits and demerits. Write the most commonly used types of bonds in brick masonry with neat sketch. [3+5]

Define pitched roof with some examples. Explain different types of roof covering material for pitched roof. [4+4]

Design a proper layout of RCC stair for public building with following data: Lobby size: 5.0m × 4.2m; Floor height: 4.5m; RCC slab thickness: 150mm; Adopt Riser = 150mm; Number of steps per flight ≤ 12. Justify your design with neat sketches. [6]

Classify the door on the basis of nature of working operations. Draw details of a steel window. [2+2]

Describe about solid ground floor with sketch. Explain the process of Mosaic flooring system. [3+3]

Define temporary construction in the building and explain the types of temporary construction use in buildings with necessary sketches. [2+6]

What is suspended ceiling used for? Write down the cement sand plastering process for wall. What are the reasons behind development of cracks in plastering? [2+4+2]

Explain different retrofitting techniques in building. Why destructive and non-destructive tests in building is carried-out. [4+2]

Explain briefly electrification system and protection of fire from electricity. [2+2]

TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING
Examination Control Division
2077 Chaitra

Exam.	Regular		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE 652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
 - ✓ Attempt All questions.
 - ✓ The figures in the margin indicate Full Marks.
 - ✓ Assume suitable data if necessary.
1. Differentiate between ventilation and air-conditioning. What are the factors to be considered on orientation of building? [4+4]
 2. Define moisture. What are the sources of moisture in a building? Describe the method of moisture control in the basement. [1+3+4]
 3. Define soil exploration. Explain what type of foundation will you recommend for the foundation on hard rock with justification. [2+4]
 4. Describe random rubble and dry rubble masonry with figure. Find out the quantities of cement and sand of 200m² plastering area in 1:5 ratio if the thickness of plaster is 10mm. [4+4]
 5. Why steel trusses have become popular nowadays as compared to timber? Briefly discuss about the types of triple timber roof. [3+5]
 6. Plan a suitable staircase for public building in which stair room measures 5.5m × 6.5m. The vertical clear distance between floors is 3.4m and slab thickness is 150mm. [6]
 7. Show in figure the general parts used in door and windows. Explain things to be considered in timber flooring with figure. [4+4]
 8. Explain about the form work for column and beam with necessary sketch. Describe about the functions of cladding and its type. [4+4]
 9. Write the steps for the painting work on metal surface. [4]
 10. Write down the causes of cracks occurs in a building and its remedial measures briefly. [4]
 11. Explain the various techniques of retrofitting in a building. Why retrofitting in existing building is important? [4+2]
 12. List out the principle to be followed while laying out the water supply system in building. Discuss about different components of rainwater harvesting. [3+3]

03 TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING
Examination Control Division
2075 Bhadra

Exam.	Regular		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. What do you mean by orientation of building? What should be considered for orientation and planning of building? What are the requirements of ventilation? [8]
2. What do you understand by thermal comfort? Explain various methods of thermal insulation for exposed walls, doors and for windows with neat sketches. [8]
3. Briefly explain different methods of determining bearing capacity of soil for design purpose. List out the common foundation failures. [5+3]
4. What are the properties of mortar? Estimate the quantities of materials for 10 m³ brick work where, size of brick is 57mm*115mm*240mm, thickness of mortar is 10 mm and mortar of cement sand ratio is 1:6. [3+5]
5. Define pitched roof, its type and what factors should be considered while selecting a roof covering material? [4+4]
6. What are the essential requirements of good stair? State different types of stair as per shape. [4]
7. Explain elements of battered door shutter with sketch. [4]
8. Explain construction method of marble flooring. [6]
9. Differentiate between shoring and underpinning. Explain cantilever scaffolding with neat sketches. [1+3]
10. What do you mean by floor finishing and wall cladding? Mention some common floor finishing materials. [6]
11. How earthquake protection can be achieved in building. Explain. [4]
12. Define retrofitting. Explain techniques used for seismic retrofitting of building. [6]
13. Explain rainwater harvesting, write down its reasons behind it and list out its basic components. Illustrate components of the rooftop rain water harvesting system. [1+1+2+2]

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. Define principles of orientation and planning of a building briefly. What are the main factors to be considered for best orientation of building? [7+3]
2. What is damp proofing? Describe general methods of damp proofing. [2+6]
3. Define foundation. What are the basic requirement of foundation? Explain different types of shallow foundation with necessary sketches. [1+3+6]
4. Define mortars. Find out the quantities of cement and sand for 100 m² plastering area in 1:6 ratio if the thickness of plaster is 12mm. [2+6]
5. What do you mean by rainwater harvesting? Describe the fundamental requirements of Electrical wiring. [3+3]
6. Define single/double/multiple timber roofs. Draw neat sketch of king post truss labeling with corresponding elements. [3+5]
7. Define stair. Design a quarter turn staircase for a residential building in a lobby of size 5.5m * 4.0 m. The height of floor to floor is 3.0 m. Assume necessary data if required. Draw neat plan to justify your design. [1+6+1]
8. Explain shoring, list out its types. Describe flying shoring with necessary sketches. [1+3+4]
9. How do you define retrofitting? Explain RCC and steel jacketing with neat sketches. [2+6]
10. Write short notes on: (any two) [2×3]
 - a) Construction method of terrazzo flooring
 - b) Differentiate between plastering and pointing
 - c) Retaining wall

05 TRIBHUVAN UNIVERSITY
INSTITUTE OF ENGINEERING
Examination Control Division
2074 Bhadra

Exam.	Regular		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt **All** questions.
- ✓ The figures in the margin indicate **Full Marks**.
- ✓ Assume suitable data if necessary.

1. a) Explain moisture movement through Building Component. Describe the methods to stop moisture entering to a building? [8]
- b) What do you mean by thermal comfort for the building purpose? Explain its classification with appropriate examples. [8]

OR

Illustrate the requirements of lighting in the building. What are the principle for the site selection and planning?

2. a) Describe the factor affecting the design of foundation. How can we improve the bearing capacity of soil? [8]
- b) What kind of member is queen post truss? Draw a queen post truss explaining their element's function. [8]

OR

Define the terms scaffolding, underpinning and shoring. Explain the methods to carry out underpinning work.

3. a) Explain the general parts and terms used in door and window with necessary diagram. Define casement, awning and hopper window. [8]
- b) Design a suitable staircase for public building in a hall of size 5.50 m * 7.50 m. The vertical clear distance between floor is 3.5 m and the RCC slab thickness in 150 mm. (assume any necessary criteria, if required). [8]
4. a) How earthquake protection can be achieved for a load bearing masonry building? What are the factors to be considered for improving Building for seismic safety? [8]
- b) What are the various techniques of retrofitting? Why retrofitting in existing building is important? [8]
5. Write short notes on: (Any four) [4×4]
 - a) Form works
 - b) Causes of cracks in Building
 - c) Cladding materials for wall
 - d) Rain water harvesting
 - e) Floor and wall tiles
 - f) Mortars used in plastering works

Exam.	New Back (2066 & Later Batch)		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Building Technology (CE652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ All questions carry equal marks.
- ✓ Assume suitable data if necessary.

1. a) Define essential factors of principles of orientation and planning of building.
b) Explain factors determining thermal comfort.
2. a) Describe in detail the causes of foundation failure.
b) Draw and explain corner wall of English and Flemish bond (two courses of each in plan and elevation).

OR

Explain with the help of neat sketches construction of cavity wall.

3. a) Describe collar timber roofs with necessary sketches.
b) The inside dimension of a stair case in a residential building are 1.8 m×3.9 m. The height of floor to floor is 2.4 m. The thickness of waist slab is 0.15 m. Design a proper layout with neat sketches.

OR

Explain elements of panelled and battened doors with neat sketches.

4. a) With the help of neat sketches explain solid and suspended ground floor.
b) List out different types of shoring. Explain raking shore with necessary sketch.
5. a) Differentiate between structural and non-structural cracks and with the help of neat sketches. Write down its causes of occurrence.

OR

Explain conventional strengthening methods used for seismic retrofitting and retrofit of structures using innovative materials.

- b) Define rain water harvesting. Explain different methods of treatment of rain water.

OR

Explain ingredients of an oil borne paint.

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ All questions carry equal marks.
- ✓ Assume suitable data if necessary.

1. a) Explain various types of moisture movements in different components of building structures.
b) What do you understand by orientation of building? Discuss the factors to be considered for the best orientation of a building.
2. a) Explain different types of shallow foundation with neat sketches.
b) Explain various types of stone masonry. Draw typical sketches to illustrate them.
3. a) With the help of neat sketches, list and explain the terms used in pitched roof.
b) Design a dog legged RCC stair for a residential building with a staircase of internal dimension of 4.6 m×2.6 m and 3.0 m floor to floor height. Draw both plan and section to justify your design.
4. a) Give a list of materials which are commonly used as floorings and give a brief description of each.

OR

Discuss purpose and sizing of doors and windows. List different terms used in panelled doors.

- b) Define shoring with the help of neat sketches. Explain single flying shore.

OR

Explain methods of pointing and types of pointing.

5. a) How do you define retrofitting of building structure? Explain conventional jacketing with necessary sketches.
b) Explain rainwater harvesting, write down process of treatment.

Exam.	Regular / Back		
Level	BE	Full Marks	80

Subject: - Building Technology (CE652)

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. a) What are the requirements of ventilation? Explain moisture movement through building components. [4+4]
b) What do you understand by thermal performance of building components? Explain the various methods of thermal insulation for exposed walls and roofs. [8]
2. a) Define foundation. Describe types of foundation with necessary sketches. [8]
b) What are the types of flooring? Explain the process of Terrazzo finish floor. [3+5]
3. a) Draw and explain different components of timber collar beam roof with their sizes. Explain different types of roof covering for pitched roof. [8]
b) Explain the preparation of cement sand mortar (1:6). Differentiate between random rubble, coursed rubble and Ashlar stone masonry with sketches. [4+4]
4. a) Define stair. Illustrate the elements of staircase with figure. [8]
b) With the help of neat sketches, differentiate between solid and suspended ground floor. [8]
5. a) How do you make a brick masonry buildings earthquake resistant? Explain with sketches various measures adopted. [8]
b) Illustrate components of the rooftop rain water harvesting system. [8]

Exam.	Regular / Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt any Five questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. a) What is moisture? What are the sources of moisture in a building? Describe the method of moisture control in the substructure of a RCC building? [2+2+4]
- b) What are the characteristics of audible sound? What are defects occurred due to reflected sound. Explain briefly the different methods of sound insulation. [8]

OR

Explain the different types of thermal insulating material. Explain the different process of insulating various building elements such as roofs, exposed walls and doors and windows.

2. a) What are the general classifications of foundation? Describe the common problems of existing foundation. [4+4]
- b) What are different elements for vertical circulation in a building? Design a RCC doglegged staircase for a residential building in a room of 4.5m × 2.3m and floor height of 3m. Assume necessary data. Give neat sketches of the plan and section. [2+6]
3. a) What are the different components of doors and windows, explain with necessary sketches. Explain the different types of doors with the help of sketches. [8]
- b) Define roof. What are the types of roof? What are the functional requirements of roof? Describe briefly the single roof and its types with necessary sketches. [8]
4. a) What are the types of joints? Why joints are important in building construction? Briefly explain the expansion joint in a building with necessary sketches? [2+2+4]
- b) What do you understand by temporary construction in the building? Describe the types of temporary construction with necessary sketches. [8]
5. a) Why cladding is important to a building? Illustrate the types of cladding with respect to construction technique. [2+6]
- b) What are internal partitions? What are the requirements for a good partition? Explain the classification of partition with respect to materials and loading systems. [2+2+4]
6. Write short notes on: [4×4]
 - a) Day light factor
 - b) Septic tank and soak pit
 - c) Types of electrical wiring
 - d) Air conditioning

Exam.	Regular/Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt any Five questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. a) How does moisture movement occur in buildings? Explain the different types of condensations and their effects on building materials. [4+2+2]
 b) How do absorptive materials absorb sound? Write down the general considerations for noise control in buildings. [4+4]
2. a) What are the various causes of foundation settlement? Define underpinning and explain different methods of underpinning with neat sketches. [8]
 b) What is roof covering? Differentiate double and triple roofs with constructional details. [8]
3. a) What are the functions of openings? Explain any two types of door and window based on working operation with neat line sketches. [2+3+3]
 b) Define staircase. For a given space of 4.8m × 2.25m with floor height of 3.6m, design a RCC dog-legged staircase. [8]
4. a) Why is it necessary to provide a joint in building structure (especially cement concrete structure)? Draw a neat freehand sketch of vertical wall section showing expansion joint at foundation, plinth, lintel, floor and roof/terrace level for a typical residential building having 350mm thick brick wall. [2+6]
 b) What is temporary construction work? Differentiate between brick layer's scaffold and dead shoring with necessary sketches showing all elements. [2+3+3]
5. a) What do you mean by building finishes? Differentiate between tile hanging and stone cladding in external wall surface showing section (vertical) with neat sketches. [2+3+3]
 b) What are the types of suspended ceilings? Describe their functions and methods of construction. [8]
6. a) What are the general principles of electrical services systems? Explain wiring systems and also discuss about the safety precautions to be adopted while using electricity and its appliances. [2+3+3]
 b) What is domestic water supply system? Discuss with relevant sketches about septic tank soak pit system of sewage disposal at residential building site. [2+3+3]

Exam.	Regular / Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Support your answer with sketches wherever required.
- ✓ Assume suitable data if necessary.

✓ 1/ Discuss about thermal comfort in building. How can we achieve thermal comfort? Explain about active and passive methods for heating and cooling. Support your answer with neat and clean sketches. [16]

✓ 2/ Define foundation with its types. What are the causes of foundation settlement and how can we provide treatment for foundation settlement? [16]

OR

What is basement floor? What type of wall is appropriate for basement wall? Explain about waterproofing techniques in basement. Support your answer with neat and clean sketches.

✓ 3/ Why are joints necessary in the building structures? Describe in detail the types of joints in structures and their uses. [16]

OR

Define paints. What are the ingredients of oil paints? What are the characteristics of good paints? How do you undertake painting works in new and old woodwork?

✓ 4/ a) What is roof? Show the comparative advantages and disadvantages of slope and flat roof. [8]

b) Describe shoring and scaffolding. Why are shoring and scaffoldings used in building construction? [8]

✓ 5/ Write short notes (any four) [4×4]

- a) Windows and its types
- b) Electrical safety in building
- c) Septic tank and soak pit
- d) Fire protection in building
- e) Plastering and pointing in building

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt any Eight questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Assume suitable data if necessary.

1. Describe briefly about renewable and non-renewable sources of energy highlighting the world scenario. Explain the different ideas to trap the solar energy in building with the concept of energy efficient design. [4+6]
2. What are the effect of moisture in building elements? Explain different methods by which we can stop moisture entering to building. [5+5]
3. What is basement floor? Explain about different water proofing method for basement with neat and clean sketches. [3+7]
4. Draw complete details of an R.C.C. dog-legged staircase for an office building leading from the ground floor to first floor. State reasons for size of the risers and treads adopted by you. The size of stair is 4.8m×3.0m×3.6m (height). [10]
5. How we can properly manage the water supply and sanitation system in building? Explain the function of septic tank and soak pit in sanitation system with the help of sketches. [4+6]
6. Why temporary construction is necessary in building construction? Differentiate between single and double scaffolding with constructional details. [4+6]
7. What is roof? Write down requirement of good roof. Explain about pitch or slope roof and mention its types with the help of sketches. [4+6]
8. Write short notes on (any four) [2.5×4]
 - a) Lifts and escalators
 - b) Electrical wiring system in building
 - c) False ceiling
 - d) Cladding
 - e) Construction joints
 - f) Underpinning
9. Define the safe bearing capacity and ultimate bearing capacity. Explain the methods to improve bearing capacity of soil. [3+7]

Exam.	Regular/Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Support your answer with sketches wherever required.
- ✓ Assume suitable data if necessary.

1. Explain briefly human thermal comfort. What are the thermal factors affecting thermal comfort. How human body maintains thermal balance. Explain your statement with neat and clean sketch. [16]

OR

What do you understand by Energy Conscious Design? Describe briefly the design consideration of Energy Conscious Design. Also describe the renewable and non-renewable energy, their sources and their respective examples.

2. Define stair. What are the functional requirements of good staircase? Design a dog-legged staircase for a public building in a room of 5.0m×4.0m and floor to floor height 3.0m. Assume necessary data. Give neat and clean sketch to support your design. [16]
3. What do you know about the methods of soil exploration? Define safe bearing capacity of soil and describe briefly the methods of improving bearing capacity of soil. [16]

OR

Define underpinning. Describe its necessity. What are the operations to be carried out before underpinning? What are the necessary precautions to be taken whilst underpinning? Describe briefly the methods of underpinning.

4. What is shoring? Illustrate the necessity of shoring. Describe the types of shoring. Support your answer with neat and clean sketch giving the names of different parts. [16]

OR

Define roof. What are the types of roof? What are the functional requirements of roof? Describe briefly the single timber roof and its types with necessary figures.

5. Write short notes (any four) [4×4]

- a) Windows and its types with clean sketches
- b) Ceiling: their types and fixing details
- c) Plastering and its types
- d) Water distribution system and its design
- e) Joints in structures and their necessity
- f) Painting on metal and masonry surface

Exam.	Regular/Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt **All** questions.
- ✓ The figures in the margin indicate **Full Marks**.
- ✓ Support your answer with sketches wherever required.
- ✓ Assume suitable data if necessary.

Moisture is the main problem in the building. Please illustrate the effects of the moisture in the building. Describe the main sources of moisture and explain how it moves through the building component with sketches.

[16]

OR

Define thermal comfort? Describe thermal factors affecting human comfort. Explain thermal balance of a building. Give neat and clean sketch whenever necessary.

2. Define staircase. Illustrate ideal requirements of the stair. Describe the different types of stair by shape in plan with neat sketches. Design an open-well staircase for a public building in a hall of 6.0m × 3.5m and ceiling height 3.0m. The thickness of the floor slab is 120mm. Assume necessary data. Give neat and clean sketch (plan and section) to support your design.
3. What do you understand by temporary construction in the building? Describe the types and requirements of temporary constructions with necessary figures.
4. Define paint and varnishes used in the building. Illustrate the constituents of an oil paint. Describe the painting procedures on; new and old woodworks, metal works and cement surfaces.

[16]

[16]

[16]

OR

Define roof and its types. Illustrate the functional requirements of a roof. Describe briefly single and double timber roof with necessary figures.

5. Write short notes (any four):

[4×4]

- a) Basement and retaining wall
- b) Cladding: its types and functions
- c) Septic tank and soak pit
- d) Doors and its types
- e) Partition wall and its types
- f) Wiring systems

Exam.	Regular/Back		
Level	B.E.	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3.hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ The figures in the margin indicate Full Marks.
- ✓ Support your answer with sketches wherever required.
- ✓ Assume suitable data if necessary.

- Write briefly on the thermal performances of the building sections. Define transmittance and find the transmittance of a composite wall that consists of 110mm brickwork (1/2 brick) as outer leaf, cavity of 25mm, thermocole insulation of 25mm, 110mm brickwork as inner leaf. There is 12mm thick plaster on external side of outer leaf and internal surface of the inner leaf. The conductivities of the brickwork, cavity, thermo Cole insulation and plaster are 1.15, 0.026, 0.034 and 0.72 W/m°C respectively. The internal and external surface conductances are 8.12 and 10.0 W/m²°C. Draw a neat sketch of thermal gradient of this composite wall. [16]

OR

Describe human thermal comfort and the thermal factors affecting human comfort. How does human body maintains the thermal balance. Explain sun and thermal balance of human body with necessary sketch. Illustrate briefly the thermal preferences.

- Define staircase. Mention ideal requirements of the stair. Describe the different types of stair by shape with neat sketches. Design a dog-legged staircase for a residential building in a lobby of 4.5m×3.0m and floor height 3.0m assume necessary data. Give neat and clean sketch to support your design. [16]
- Describe briefly the causes of foundation settlement and also the effects resulted in the structure from the unequal settlements. Explain the reasons for not preferring black cotton soil in the foundation? [16]

OR

What is underpinning work? Why does it necessary in the structure? Write down the sequences of operation and the methods of underpinning.

- What is construction joint in the structure? Illustrate the positions of construction joints in beam, column and slab. Describe the methods of joining new concrete to old one in the structure. [16]
- Write short notes (any four): [4×4]
 - Retaining wall and forces acting on it
 - Energy conscious building and its design considerations
 - Partition walls: their types and functions
 - Pointing: its types and procedure
 - Water supply and its distribution system
 - Noise and its effects

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCE	Pass Marks	32
Year / Part	III / I	Time	3 hrs.

Subject: - Building Technology

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ Attempt All questions.
- ✓ All questions carry equal marks.
- ✓ Assume suitable data if necessary.
- ✓ Support your answer with sketches wherever necessary.

1. Moisture is the great problem in the building, write down the effects of the moisture in the building. What do you understand by Moisture control in the building? Describe briefly the different methods of moisture control for different sources of moisture. Explain your statement with neat and clean sketch where ever necessary.

OR

What is natural and artificial lighting in the building? Define day light factor with necessary figure and formulae. Calculate the internal illumination of your class room having day light factor 2.0% and outdoor illumination 7000 lux.

2. What do you understand by the temporary construction? Illustrate the conditions of applying shoring in the structure. Describe in detail the types of shoring with neat and clean sketches.

OR

Describe briefly on formwork for excavation and different methods used in timbering of trenches for firm and loose soil. Define formwork for reinforced concrete construction and its principal requirements. Illustrate sketches where ever necessary.

3. Define roof and its types. Illustrate the functional requirements of a roof. Describe briefly single, double and triple timber pitched roof with necessary figures.

OR

Describe the joints in the structure. Illustrate the types of joints. Explain briefly the expansion and construction joints and their probable positions in the structure.

4. What are the functional requirements of good staircase? Mention the types of staircase (by shape) with neat sketches. Design a open-well staircase for a public building in a room of 5.5m×3.5m and floor height 3.6m. Give neat and clean sketch of plan, sectional elevation and necessary details.
5. Write short notes (any four)
 - a) Cement Plastering: its types and procedure of application
 - b) Ceiling: its uses, requirements and types
 - c) Cladding: its types and functions
 - d) Septic tank and soak pit
 - e) Window and its types
 - f) Painting on old wood works and cement surfaces
 - g) Passenger lift and freight lift
